Anaerobic Effluent Treatment

Today's demands on an efficient and economical treatment of production effluent, greatly exceed mere effluent clarification. Conserving water and recirculating clarified water back into the operation have the highest priority. With our unique combination of anaerobic high-performance clarification and the LIME TRAP™, we provide water treatment of the highest technical level and at the same time offer low operational costs with a small space requirement. In addition, the largest possible amount of water can be recirculated into the production without compromising the product quality.
